RE: Lene Rambekk is our new Manager Scientific Laboratory

It is a pleasure for Norner to announce that Lene Rambekk has been hired as our new laboratory manager from June 1, 2019.

Lene has an MSc in polymer chemistry, and a wide industrial experience from Trelleborg Viking, and REC, among others. She comes to Norner from Herøya Industripark AS where she had the position of head of operations.

Lene is replacing Jørgen Nyhus, who will continue to develop Norner in his position as Business Director for the Building and Infrastructure business area. Lene has broad industrial experience and will contribute greatly to the further development of our laboratory and our organization.

Norner ended another successful year in 2018 with record sales and good earnings. We have now embarked on several new research projects and achieved very good results in technology development with our customers. Norner's world-leading plastic expertise will be very important in the future to address the major global challenges of circular economy and create improved sustainable solutions with the industry.

"Growth is the main reason why we develop our organization and leadership. The hiring of Lene Rambekk is an important part of developing our scientific laboratory further on methods, services and quality. We are very pleased to welcome Lene to Norner.", Says Kjetil Larsen, Managing Director at Norner.

"I have been in the industry for many years and was ready for new challenges. Norner is an exciting company, and for me this is a great opportunity to continue with management in combination with my profession. I am very happy to be part of the Norner team.", says Lene Rambekk.

Lene Rambekk begins in Norner in a phase where several new investments are planned and the construction of a new technology centre, the Polymer Exploration Centre, is on the drawing board. She has already been responsible for investing in a new advanced electron microscope that makes Norner even better equipped to serve our industrial customers in materials technology.
