RE: New researcher at Norner, Lene Sparre Thunes

We have the pleasure to inform that Norner has employed Lene Sparre Thunes as researcher to strengthen our capabilities within the compounding area.

"This field is prioritized in order to secure high quality solutions to our customers within plastic additives and modifications", says Lars H. Evensen, Business Area Manager for Norner's Plastic Additive Centre. "Strengthening of our compounding resources fits also well with projects where Norner is involved in the development of novel nanocomposites and other advanced compounds. With Lene's background from the plastic pipe industry she will also give valuable contribution to Norner's offerings within the pipe segment".

Past experience

Lene comes from Pipelife Norge AS where she worked as project manager PE pipes for water and sewage market. She has earlier been working with production projects in China, as quality engineer for injection moulding to the mobile phone industry as well as thermal and physical testing of plastic products.

Lene is MSc in Polymer Science, have a solid industry practice as well as excellent project management skills.

With best regards
Ole Jan Myhre
